

Pick your Patio: Style that Lasts

WICKER

- Wicker refers to the method of weaving, not the material used
- Synthetic, or all-weather, looks great and is the best option available for durability
- Wicker is woven over metal frame for strength and stability

Maintenance: Don't use bleach or abrasive materials. Storing inside during winter months will extend the life of the product.

METAL

- Aluminum is strong, stylish and rust-resistant
- Steel is less expensive, but can rust if the finish is damaged
- A powder-coated finish is preferable and lasts longer than paint

Maintenance: If steel is scratched and bare metal exposed, lightly sand with extra-fine sandpaper, treat with rust inhibitor and apply touch-up paint. Use furniture covers or store inside during winter months.

POLYWOOD

- Environmentally friendly: made from recycled plastic
- Won't fade, warp, rot or deteriorate
- Exceptional weather resistance
- No staining, sealing, sanding or painting is needed

Maintenance: Use a soft bristle brush to dislodge dirt. Bleach solution can also be used. Periodically tighten fasteners if necessary.

IRON

- Classic style, upscale appearance and superior strength
- Stable, solid and sturdy
- Hefty and heavy, won't be blown by wind
- More expensive than other outdoor options

Maintenance: Do not leave in standing water. Seasonal touch-ups are needed to fix scratches and chips before they rust. Use extra-fine sandpaper, rust inhibitor and touch-up paint.

FABRIC

- 100% solution-dyed acrylic is the best option for outdoor furniture
- Solution-dyed upholstery fades less, is easier to clean and tolerates bleach
- Combines the comfort of indoor fabrics with durability needed outside

Maintenance: Blot liquid spills with a clean cloth. For 100% solution-dyed acrylic, a mix of 1 cup bleach, ¼ cup mild soap and 1 gallon water may also be used.
